TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL, HTML, CSS
Frameworks/Libraries: Express.js, React.js, NumPy, Pandas, Matplotlib, Pytorch, Scikit-learn
Tools & Platforms: Node.js, MongoDB (Mongoose), Git/GitHub, Postman, Tableau, Figma, WordPress

EDUCATION

Georgia State University — Atlanta, GA
B.S. in Computer Science, GPA: 3.5 *Graduation May 2027*

Clubs: Progsu (Programming Club), Computer Science Club, Panther Web-Dev Club
Relevant Coursework: Artificial Intelligence, Database Systems, Software Development, Probability & Statistics in R, Computing in Python, Data Structures & Algorithms, Linear Algebra, Calc I & II

EXPERIENCE

Apple — Austin, TX
Incoming Software Engineer Intern, IS&T Department *Summer 2026*

- Apple online store team

Broadwell Group Inc. (BGI) — Atlanta, GA
Frontend Developer Intern, Remote *Summer 2025*

- Independently built & deployed company website using custom WordPress, HTML, CSS, & JavaScript for design
- Shifted company from an outdated legacy hosting package to a modern service, reducing costs by 24% per year
- Created a new site with modern design, optimized assets/plugins, & mobile UI, reducing page load time 50%.
- Managed DNS records by connecting domain to new hosting service, added TXT records to authenticate email
- Often collaborated directly with the company president to align development with business goals/for new features

PROJECTS

RESTful Expense Tracker API — JavaScript, Express.js, Node.js, MongoDB, Postman *August 2025*

- Engineered a secure & scalable full-stack RESTful API with Node.js, Express, & MongoDB (Mongoose ODM)
- Implemented authentication & authorization system using JSON Web Tokens (JWT) & bcrypt.js, ensuring encrypted password storage, token-based protected routes, & personalized data management to emphasize security
- Developed CRUD style endpoints for expense tracking, & user accounts linking transactions to authenticated users
- Architected scalable database relationships with Mongoose schemas, & API testing suite using Postman collections

FuzzyRec: Fuzzy Logic Recommendation Engine — Python, Pytorch, Pandas, scikit-fuzzy *Spring 2026*

- Product recommendation system using fuzzy logic to handle vague preferences like "affordable but good quality"
- Defined 10 input variables (price sensitivity, brand loyalty) & a 72-rule inference engine to score recommendations
- Designed system to produce explainable recommendations where each output can be traced to readable if-then rules
- Processed features from Amazon review data like sentiment scoring, price normalization, & user interaction history

Image Browser Web Tool — JavaScript, HTML, CSS, Unsplash API *April 2025*

- Built an image search interface using HTML, CSS, & JavaScript that fetches high-quality images via API
- Implemented a “Show More” pagination feature to progressively load additional image results, improving usability
- Structured codebase for scalability and maintainability, enabling easier feature expansion in the future.
